

1. Motivation

Explain the problem and why it matters in two or three short sentences. Identify the gap that your work addresses.

Research objectives

- State the central research question.
- Define the specific contribution.
- Explain how success is evaluated.

Background / system overview

System overview or motivating example

Figure 1. Replace this panel with a schematic or photograph.

Add only the background needed to understand the method and results.

2. Methodology

Describe the approach briefly. Use a diagram to show the main stages.

Method / workflow diagram

Figure 2. Explain the workflow in one sentence.

Model / experimental setup

Replace the illustrative equation with your model, or remove it.

$$\mathbf{x}_{t+1} = f(\mathbf{x}_t, \mathbf{u}_t)$$

- Dataset or system: [description].
- Baseline: [comparison method].
- Evaluation: [metric and protocol].

Key contribution

Describe what your approach adds and the conditions under which it applies.

3. Results

Main results figure

Figure 3. State the observation, comparison, and relevant conditions.

Report the most meaningful quantitative result here. Include units and uncertainty where applicable.

4. Conclusions

- Summarise the main finding.
- Explain its practical significance.
- State a limitation or next step.
